EcoSanRes
Informative tools

- Fact sheets, leaflets

Taki Busasché is rich in NPK and organic matter, and can replace other base fertilizers (NPK, chicken manure etc).

Apply 1-2 small cans or handfuls of Taki Busasché per pocket and cover with soil before sowing.

Use gloves and mask as a safety measure.
Guidelines:

For Niger:

• Guideline for decisionmakers – policy and advocacy tool
• Guideline for extension workers – details on crop results, recommended fertilization levels

Globally:
Coming Guideline on Urine Use in Crop Production with support for development of local guidelines
Calculator for output of productive sanitation systems

Target Group: Decision makers, extension workers and organisations working in the field

Output from the Crop calculator
- How much cropping area is recommended for a given amount of urine?
- How much yield can be expected when urine, compost or mineral are used as fertilizers?
- How much fertilizer is needed for a certain area? Answer given for urine, compost, urea and SSP.

Output from the Urine production and value calculator
- Amount of urine available for crop production
- Value of nutrients in urine compared to nutrients in mineral fertilizer
Tools for businessmen and decisionmakers to make initiated decisions!
